

# Retaining Cognitive Abilities in Alzheimer's & other Dementias

Alzheimer's Network invites you to join us to discuss what changes with memory in Alzheimer's disease and what does not. While dementia is associated with significant changes in cognitive abilities there are some abilities that are retained. Discussion will also included common trajectories of cognitive changes and expert and why. Techniques to handle behavioral problems and emotional outbursts will also be presented.

Sponsored by:

Guest speaker, Dr. Rob Winningham has nearly 20 years of experience researching applied memory issues and for the past 14 years has conducted research on older adults and brain injured patients. He is a full Professor and Chair of the Psychology Division at Western Oregon University (WOU).
