Transitions of Care – Lessons Learned for Improved Outcomes

Nancy Skinner, RN-BC, CCM, ACM-RN, CMCN, active consultant in health care and two-time former CMSA president, will lead this informative, solution-based presentation. The presentation will build upon the professional need to understand how the role of the Affordable Care Act has transformed hospitals and improved outcomes over the last 10 years.

Attendees will look at what various Transitions of Care programs have done in hospital systems across the country and will explore the benefits and lessons learned along the way. The content will impact any health care professional looking for refreshed solutions for creating smooth transitions. Strategies for improved outcomes can benefit even those with low readmission rates or concerns about “bounce-back” rates.

By the end of the program, participants will be able to:

- Identify the key elements that advance a successful transfer of patient care from one setting or level of care to another
- Recognize factors contributing to readmission rates, including social determinants of health
- Examine available tools and resources that advance a safe, effective, efficient, equitable, patient-centered journey across each transition of patient care
